

Making the Most of Your Massage

How to Prolong the Benefits of Bodywork

Barbara Hey

A massage works in wonderful ways, easing stress and pain, calming the nervous system, increasing circulation, loosening tight muscles, stimulating internal organs, and enhancing skin. The multiplicity of physiological responses sends a simple, clear message to the mind: Massage feels good. Of course, you want to hold on to that just-had-a-massage feeling -- total body relaxation, muscles relaxed and at ease, and fluid movement restored -- for as long as possible.

But how long that bliss lasts depends on the state of your body. If you're suffering from chronic pain or recovering from injury, then it may take more sessions and perhaps different

Massage Frequency

How often you receive massage depends on why you're seeking massage. In dealing with the general tension of everyday commutes, computer work, and time demands, a monthly massage may be enough to sustain you. On the other hand, if you're seeking massage for chronic pain, you may need regular treatments every week or two. Or if you're addressing an acute injury or dealing with high levels of stress, you may need more frequent sessions. Your situation will dictate the optimum time between treatments, and your practitioner will work with you to determine the best course of action.

The more often you receive massage, the more therapeutic it becomes.

modalities before optimal health is restored.

If massage is part of your regular health regimen, then it's more likely the effects will endure. In other words, the effects of massage are cumulative, like any healthy habit. The more often you get a massage, the greater and longer-lasting the benefits.

"You need to consider how you felt before the session and how you felt after, and then look at how long you maintain that," says Pieter Sommen, the chair of the eastern department in the Swedish Institute School of Massage Therapy in New York.

In general, experts say "regular" is preferable, but how regular depends on your situation. While daily massage would be delightful, practical considerations such as cost, time, and physical need likely determine the frequency of treatments. "It's best to maintain a schedule," says Eeris Kallil, CMT, a shiatsu instructor at the Boulder College of Massage Therapy in Colorado. "That way the body becomes conditioned and prepared for session at specific intervals."

Maintenance

Whether you get a massage weekly, monthly, or just every once in a while, the following habits can maximize and extend the afterglow of treatment.

WATER

One bit of advice you'll hear over and over again is to drink plenty of water after a massage. Bodywork -- no matter the particular modality -- releases toxins, such as lactic acid and carbonic acid, that need to be flushed from the body. Massage also promotes circulation, increasing blood flow and oxygen and stimulating the lymphatic system, which helps rid the body of pathogens. After-massage hydration supports these functions, helping to eliminate released impurities, sooner rather than later.

STRETCHING

Another helpful habit is stretching between massages to maintain joint mobility, prevent muscles from tightening up again, and keeping the life energy flowing. This may mean doing yoga or whatever specific or full-body stretches suggested by your practitioner. After a shiatsu session, for example, your practitioner may recommend "makko-ho" stretches, a series of six exercises designed to keep energy circulating. "This series of stretches take anywhere from 5 to 10 minutes a day, but really help keep the chi flowing through the body," says Kallil.

EXERCISE

Working out can also help maintain the benefits of massage, and this habit should be continually cultivated. However, if you're receiving massage therapy to help speed muscle strain recovery, you may need to ease up on the exercise for a while and give the body time to heal -- particularly if you're

recovering from a strenuous body-pummeling training regimen. "You don't want to over-work your body," says Kallil. That is, if running is taking a toll, try something more gentle and meditative such as swimming, walking, or tai chi.

BODY AWARENESS

After a massage, respect how your body feels. If your body seems to ask for rest, give in to that demand. This may mean backing off the to-do list, taking it easy, moving slower, and perhaps doing less for a while. And don't allow yourself to get fatigued because it will undermine the effects of massage. Get sufficient sleep to allow the body to absorb the effects and regain vitality.

DIET

Finally, since you've just rid the body of toxins, support the body's renewed state by adhering to a healthy diet rich in

fruits and vegetables, which will continue the detoxification process. Lay off the espresso and all adrenaline-challenges for a time -- which would short-circuit relaxation anyway -- and enjoy the calm.

The benefits of massage are many, including: increasing circulation, allowing the body to pump more oxygen and nutrients throughout the body; stimulating lymph flow and boosting immunity; relaxing overused or tight muscles; increasing joint mobility and range of motion; reducing recovery time after strenuous workouts or surgery; and relieving back pain and migraines, just to name a few.

After receiving a massage, clients feel rejuvenated, relaxed, and refreshed. By opting for a few lifestyle choices, you can extend these benefits and get the most out of your massage.

Stretching between massages helps maintain relaxed muscles, joint mobility, and energy flow.

The Art of Bathing

Simple Recipes to Soothe Mind and Body

From bubble baths to essential oils to Dead Sea salts, prepared bath products are designed to enhance a bathing experience, but they can be expensive. Instead of spending the extra money on special bath products, try one of these natural, simple bath recipes with ingredients you probably already have in your cupboard or refrigerator.

Epsom Salts

ADD 2 CUPS EPSOM SALTS TO BATH WATER.

Magnesium sulfate, or Epsom salts, has been used for centuries as a folk remedy, and research now confirms its numerous benefits. The second most abundant element in human cells and a crucial component for bone health, magnesium is also needed for muscle control, energy production, and the elimination of toxins. Magnesium eases stress, aids sleep, and improves concentration while reducing inflammation, joint pain, and muscle cramps. Sulfates help to flush toxins from the body, prevent or reduce headaches, and even improve brain function.

Most American diets are deficient in magnesium. However, one of the best ways to boost dietary intake is by bathing in Epsom salts, which are readily absorbed through the skin.

Milk

ADD 2-4 CUPS MILK OR BUTTERMILK TO BATH WATER.

Rich in calcium, protein, and vitamins, milk replenishes the skin, while lactic acid found in milk acts as a natural exfoliant. A member of the alpha hydroxy acid family, lactic acid breaks the glue-like bonds between the outer layer of dead skin cells. Soak in a milk bath for 20 minutes, then gently scrub skin with a loofah or washcloth.

Honey

ADD 1/4 CUP HONEY TO BATH WATER.

A fragrant, natural humectant, honey helps skin attract and retain moisture. Its antibacterial and anti-irritant properties make it an ideal cleansing and soothing additive to a warm bath.

Turn your home bath into a spa experience.

Hot or Cold for Injuries?

How to Know Which is Best for You

Art Riggs

We all know that treating an injury immediately after it happens can help minimize the pain and damage as well as facilitate recovery. But after rolling your ankle in a soccer game, or hurting your back when lifting your toddler, or tweaking your knee when stepping out of your car, what's best? Should you ice it to try to control inflammation, or would heat be better to promote circulation?

While it's difficult to establish a fail-safe rule for when to apply ice or heat, the general directive is to use ice for the first forty-eight to seventy-two hours after an acute injury and then switch to heat.

It Depends

The reality is that many conditions are not necessarily the result of a specific

injury. I call these conditions "recurrent acute" and find them by far the most common: sciatica that occurs when you drive a car; a back that flare up every time you garden; or tennis elbow from intense computer work. In these cases, consistent and frequent applications of ice may prove very helpful over long periods of time, particularly immediately after experiencing the event that causes problems.

Conversely, back or other muscle spasms caused by overexertion rather than injury may benefit greatly from heat immediately upon the onset of symptoms or immediately after exercise in order to relax the muscles and increase circulation. Also, muscle belly pain not resulting from acute and

serious trauma generally responds well to heat, which can break the spasms and release the strain. On the other hand, nerve and tendon pain--regardless of the duration of symptoms, even if you've been experience them for months--benefit from ice.

What Works for You

The bottom line: different individuals will constitutionally vary greatly in their reactions. Some people are more prone to the types of inflammation exacerbated by heat, while others find their bodies contracting and tightening at the mere mention of ice. Try each option and pay close attention to how your body and mind respond, and let your gut be your guide. Ultimately, what works best for you is, well, what's best for you.
